

Cool and Reliable Refrigerated Shipping

Horizon Lines has added nearly 3,500 new refrigerated containers in recent years as part of a comprehensive equipment fleet reinvestment program.

COOL and we know it.

Our new refrigerated containers were selected for their excellent cooling capacity, reliability and high performance.

Design Enhancements

- Increased insulation density to improve operating efficiency
- Additional support in ceilings and floors to add strength
- Stronger T-rail floors to improve durability
- Aluminum rub rails and scuff plates on side walls to avoid damage
- Backup sensors inside reefer to ensure temperature integrity

Security Measures

Each container is equipped with a new door cam lock and high-security seal that prevents entry without detection. The actual reefer unit itself is bolted into place and wire sealed to deter unauthorized entry from the front of the container. These features were specifically employed to secure high-value shipments for our customers.

Pre-Trip Inspections

We regularly execute detailed pre-trip inspections and cleaning processes to ensure all mechanical functions are working properly and that every container departs in good condition.

Service Delivery

Every one on our team, from sales to operations and customer service, is committed to providing the highest quality refrigerated shipping service backed by reliable equipment. Operational quality control processes have been established to deliver perishable products and pharmaceuticals with the utmost care and professionalism.

That's our promise. **Always Delivering.**
